Declaration by FC as an CopSIC. All timber being from the Forest.
Sustainable source represents a negligible risk under EU TR (no 305/2011)

The Alder Carr will be designated as a Natural Reserve. Drainage in and around the area will be managed sympathetically to ensure water levels can be retained where possible.

Infected pine stands will be removed early. More mature stands will be retained beyond their economic rotation if they remain healthy. This will offset the loss of woodland cover caused by the early removal of infected stands.

The remaining ASNW will be linked by the sympathetic management of rides and forest roads and the gradual removal of conifers and restoration of broadleaves through restocking and natural regeneration.

TSI will be retained in perpetuity wherever possible for biodiversity. Additional trees will be identify to be retained as TSI to ensure their presence long-term.

Water features will be opened up to increase diversity and provide more structured riparian habitats for the EPS and woodland flora and fauna.

A sustainable felling programme will be introduced with the size, scale and timing of felling operations designed to create a more diverse forest structure and woodland edge.

All forestry operations will be carried out with due regard to the presence of the EPS and will be designed to maintain the current population and expand and enhance available habitat.
