

# A palace fit for a king

**Creativitree #45**

## **Creativitree # 45**

Create a creepy crawly palace for the bugs and  
beasts that inhabit your garden...

1. Choose an area of your garden that won't be disturbed by people and is sheltered from the wind and rain.
2. Create a tower by pushing at least five long sticks into the ground in a circle; this will stop your pile falling over.
3. Fill the twig tower with sticks and twigs lying on their sides - these are great for millipedes, woodlice and other grubs which feed on dead wood.
4. Stuff the holes between the stacked sticks with dead leaves and dead grass. This provides a useful place for creatures to lay their eggs.
