# Landscape change

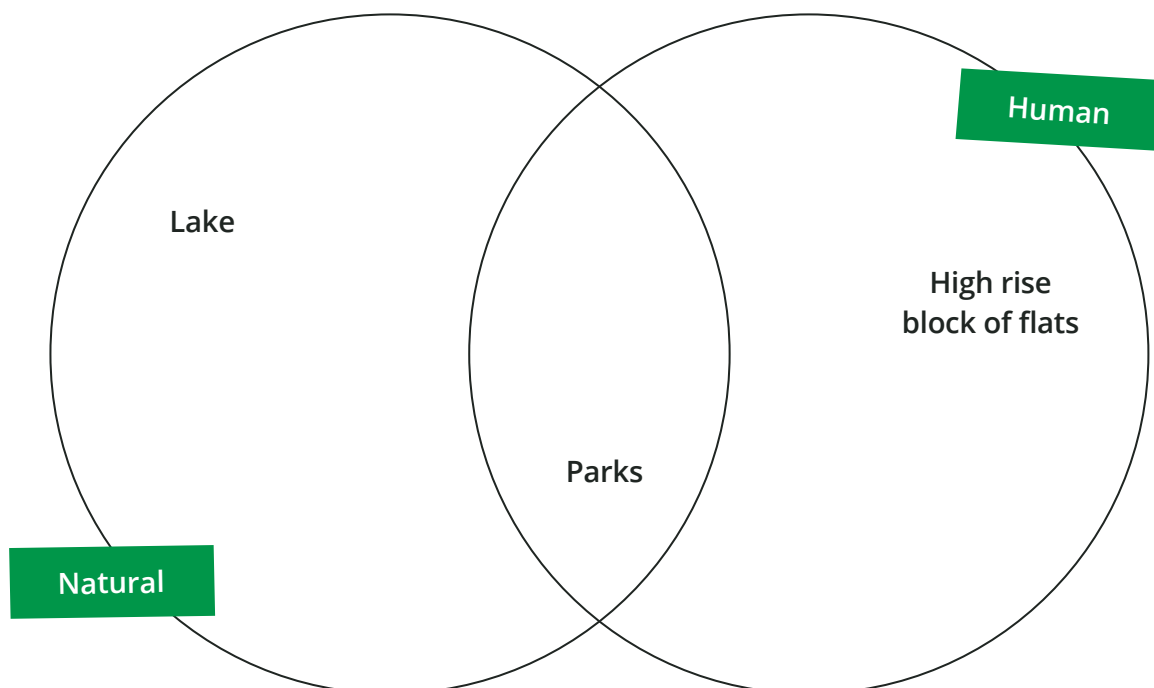

1 Define the term 'landscape'

---

---

2 The two photos show typical natural and human landscapes.

a Use these photos and your own knowledge to complete the Venn diagram. Identify natural and human features of the landscape together with those features that you consider to overlap the two categories. Some examples have been added to the diagram to help you.

b Which of the two landscapes in the photos do you prefer and why?

---

---

3

a

List physical and human processes leading to landscape change.

| Human | Physical |
|-------|----------|
|       |          |

b

Complete the table below to describe some causes of landscape change.

| Causes of change | Change seen in the landscape |
|------------------|------------------------------|
|                  |                              |
|                  |                              |
|                  |                              |
|                  |                              |
|                  |                              |
|                  |                              |

- 4** Give two examples where natural processes have resulted in a landscape change which has had a positive impact for people.

---

---

---

---

Now give two examples of negative impacts

---

---

---

---

- 5** How has the landscape changed in your local area? What caused this change and what impact has this had on both people and the environment?

---

---

---

---

---
