

## Archaeologist heritage in the forest

# Decisions about heritage: making a new cycle trail

### The Task

You are in charge of trails at High Lodge and wish to create a new trail for cyclists.

Work your way through these sheets to complete the task.

### Things to bear in mind

Because parts of the Forest have wildlife protection as Sites of Special Scientific Interest or as Special Protection Areas, you must avoid these areas when planning the route of your trail.

Though you can cross archaeological sites, you must protect them and not damage them in any way.

## Plan the route of your new cycle trail

Explain why you have chosen that route:

Explain how you will ensure the archaeology continues to be protected from year to year

Explain how you will use an engineering solution to give protection at any archaeology crossing points

## Complete the heritage protection assessment record

Project name:		
Type of heritage feature:		
Grid reference of heritage feature:		
Can the heritage feature be avoided?	yes/no	
Is there a suitable engineering solution to mitigate the impact of crossing the Heritage Feature?	yes/no	
Type of engineering solution selected  hint: see engineering selection table in the document	Standard Type 1 Geo Grid	Rock Feature Solution
