

Streamside Corridors
The riparian corridors associated with the main water courses provide site with better soils and greater shelter, and therefore most opportunities to introduce species diversity. Emphasising these valley feature will also strengthen the appearance of landform

Forest Intrusion
The finger of plantation that was intruding onto the SSSI, is now removed and the area reverted to open moor.

Moorland Boundary
Potential to mitigate the hard habitat change from forest to moorland.

Ancient Woodland Sites
Maintain or re-establish native broadleaf tree species

Ancient monuments
A number of ancient monuments are present within the plan area these can be opened up at clearfelling and maintained as open space through subsequent rotations

Picnic Site
The picnic site provides a local recreational resource and a start point for a route to Christainbury Crag. Look to maintain adjacent for cover immediately adjacent.

Internal Ownership Boundary
If practical need to ensure that proposals do not conflict in the landscape with neighbours proposals

Roadside corridors
The corridors formed by the public roads running through the forest are more sensitive in term of the near view, with sensitivity decreasing and scale increasing as you more away from the roads.

Views

Visually Prominent Zone

The North facing slope adjacent to the Kershope Burn has been subject to significant restructuring (streamside clearance). It now forms an important visual resource in the landscape. The current rotation is now beyond first thinning age and will be managed through a series of interlocking clearfells. However due to relatively lower wind hazard class (4) there is the potential to manage subsequent rotations under continuous cover
