Forestry Commission England

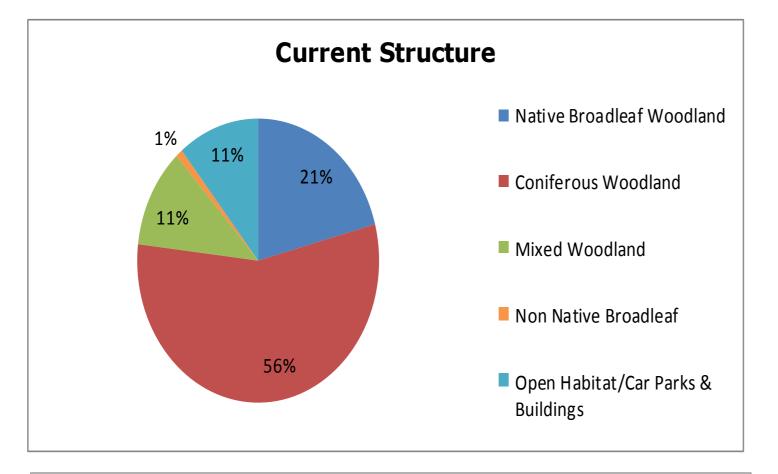

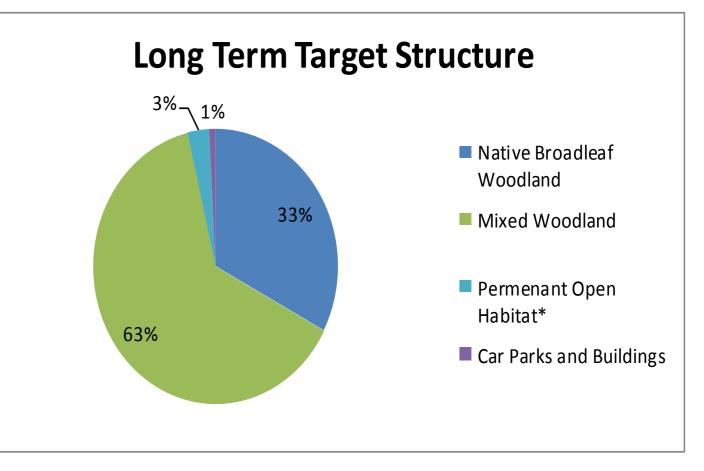

Statistics

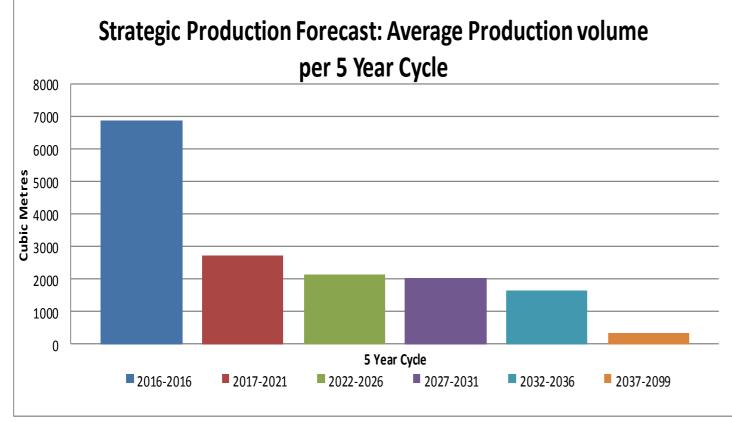

*Further rotational open space between 0.4 - 2ha in size will be created using the shelterwood silvicultural system combined with a programme of ride and road management along the areas shown as Biodiversity Corridors.

Objective	Proposed Actions to Meet Objective	Ref	Output year 10	Monitoring
Maintain and increase the native composition of ancient semi-natural woodland.	Invasive and non native species will be monitored and managed accordingly to ensure the quality of ASNW is not degraded.	1a 1b	Maintained percentage of native tree species within ancient woodland sites Any invasive or non-native plant spe- cies found In ASNW are recorded and managed accordingly with a pre- sumption of eradication.	Semi-Natural scoring via su compartment database at y and 10 Recording during Operationa assessments with appropria tion taken.
Initiate restoration of planted ancient woodland sites to native and honorary native woodland.	Managing PAWS area under a shelter wood system, favouring the retention of native broadleaves will help to reduce the non native component of these areas.	2	Increased percentage of native tree species within ancient woodland sites.	Semi natural scoring via sul partment database at years and 10.
Take opportunities to increase the na- ture conservation value of existing habitats and enhance and support the development of open space.	Road and ride edges will look to provide high value invertebrate habitat as a result of the proposals which will have a positive impact on associated species such as birds and bats. Existing open space will maintained and a wide adop- tion of the shelterwood system will provide rotational open space throughout the years. Connectivity aims to be improved to existing heathlands on the edges of woodland blocks. Examples include Stanley common and Iron Hill.	3	Opportunities are identified at Opera- tional Site assessment (OSA) stage, acted upon and recorded within this plan.	OSA checks at implementati

Monitoring and Indicators of Success

ng	Indicators of			
	Success

tional site opriate ac-	No recorded invasive or non-native species present within ASNW.			
a sub com-	Plantation on ancient woodland areas			
years 5	will show an increasingly native semi natural score at years 5 and 10.			
ntation	A record of identification of opportuni- ties, assessment of feasibility and ful- filment if appropriate.			

Monitoring and Indicators of Success

Provide, maintain and en- hance where possible the rec- reational capacity of the woodland.	Look at increasing the accessibility of footpath and trails in the woodlands with a process vegetation management around key areas. Safety checks of car parks and trails continued as per OGB 1 and 42. Provide support and guidance for the Rogate Bike park in Combe hill.	4	Opportunities are identified at Opera- tional Site assessment (OSA) stage, act- ed upon and recorded within this plan.	OSA checks at implementation stage. A record of identification of opportunities, assessment of fea- sibility and fulfilment if appropriate.	A record of identification of opportuni- ties, assessment of feasibility and fulfil- ment if appropriate.
Provide a regular supply of quality timber to support local employment and local timber processing industries.	Regular management will provide a sustainable supply of wood products to the industry.	5	Wood products supplied sustainably to industry in line with the production fore- cast.	Query sales recording package at year 5 and year 10.	Wood products supplied to the timber industry in line with production forecast whilst fulfilling other objectives
Maintain and increase the species and age diversity of the woodland.	Managing non ancient woodland areas as mixed woodland allows the woodland to support a greater species diversi- ty. This will benefit disease and climate resistance as well as adding to the aesthetic variation. The development of natural regeneration at various stag- es, will break up the currently rigid age structure	6a 6b 6c	Maintained number of tree species. Increased age diversity. Evidence of natural regeneration occurring.	Query sub compartment data base at year 5 and 10. Query sub compartment data base at year 5 and 10. Query sales and recording package at year 5 and year 10	At least the same number of different tree species present at year 10 Improved age diversity at year 10 Increased successful establishment of natural regeneration.
Control invasive plant species and reduce their impact across the sites.	Conduct regular monitoring of invasive plant species, re- acting appropriately when threats are identified.	7a	Opportunities are identified at Opera- tional Site assessment (OSA) stage, act- ed upon and recorded within this plan.	OSA checks at implementation stage.	A record of identification of opportuni- ties, assessment of feasibility and fulfil- ment if appropriate.

Monitoring and Indicators of Success

Success?

Ancient Woodland Site

The site appears to have been wooded for several centuries (and thus probably for millennia), and is certainly unlikely to have been converted to farmland in the last couple of centuries.

Ancient Semi Natural Woodland

The trees and other plant species within an ancient woodland site appear ti have arisen naturally rather than having been planted are predominately (>80%) native to the site and surrounding area.

Shelter Wood System

Woodland management system whereby the forest canopy is maintained at one or more levels without clear felling, generally being no single interruption of tree cover of more than 0.25 hectares with a maximum of 2 interruptions of this size per hectare.

Opportunities to enhance the existing areas of natural regeneration will be taken along with increasing woodland edge habitat by scalloping ride and road edges for the benefit of biodiversity.

Mixed Woodland

Woodland consisting of a fairly even mixture of broadleaf and conifer species.

Native (and honorary-native)

The trees making up the woodland are part of England's natural (or naturalised) flora. Determined by whether the trees colonised Britain without the assistance for humans since the last ice age (or in the case of 'honorary native were brought here by people but have naturalised in historic times) ; and whether they would naturally be found in the part if England.

Natural regeneration

The process of allowing a cleared area of woodland to regenerate naturally the germination and development of seeds found within the soil on site. These may be still require some protection from overbearing plan species and mammal browsing . Some enrichment planting may also be necessary or desirable in areas were natural regeneration is showing limited success or in order to diversify the species range of the woodland.

Plantation on an ancient woodland site (PAWS)

The trees within and ancient woodland site appear to have been planted. These species may or may not be native to the site and surrounding area.

Selection System

Woodland management system whereby the individual trees are selected for retention based on their character or specific qualities. The area will be thinned to favour the retention of these trees.

Yield Class

The maximum average rate of volume increment which a particular stand can achieve per hectare.

Glossary

This Forest Plan has been influenced by various key policy statements and guidance docu- Open Habitat Policy, 2010 ments as listed below.

Government Forestry and Woodlands Policy Statement–January 2013

This document sets the direction of travel for forestry policy within England and is the reference point around which main aims and objectives if forestry and woodland management are designed.

The statement sets out the following key objectives, in priority order:

Protecting the nations trees, woodlands and forests from increasing threats such as pests, diseases and climate change.

Improving their resilience to these threats and their contribution to economic growth, peoples lives and nature.

Expanding them to increase further their economic, social and environmental value.

Strategic plan for the public forest estate in England

This plan sets out the direction and goals for the public forest estate in England and indicates the actions we will be taking to achieve these between now and 2020. Our ambitions are long term and we will use a normal cycle of review over 5 years to embed these in local forest plans and ways of operating.

Our mission for the estate.

To work with others to keep the Pubic Forest Estate as a special place for wildlife, people to enjoy and businesses to thrive—and achieve this by adopting a strategy that integrates all the three drivers of sustainable land management; economy, people and nature.

Our Vision and Overall Goal

"To secure and grow the economic, social and natural capital value of the public forest estate for the people of England"

South District Forest Strategic Plan

The strategic management plan is a Forest Enterprise District Level document that informs local Forestry Commission Staff about the management direction of the Public Forest Estate and the associated policies. The Forest Plans are a key mechanism for delivering policies on the ground.

This is Government policy on how to decide when to convert woodland to open habitat in England.

United Kingdom Forestry Standard

The UK Forestry Standard (UKFS) is the reference standard for sustainable forest management in the UK. The UKFS, supported by its series of guidelines, outlines the context for forestry in the UK, sets out the approach of the UK governments to sustainable forest management, defines standards and requirements, and provides a basis for regulation and monitoring.

UK woodland Assurance Standard (UKWAS)

An independent certification standard for verifying sustainable management in the United Kingdom.

Keepers of Time

This policy statement celebrates the importance of our native and ancient woodland sets out a basis on which to achieve the following vision.

"Ancient woodlands, veteran trees and other native woodlands are adequately protected, sustainably managed in a wider landscape context, and are providing a wide range of social, environmental and economic benefits"

Managing ancient and native woodland in England: Practice Guide

This practice guide has been produced to help practitioners translate what measures and practical action can be taken to protect and enhance our ancient and native woodlands and guides implementation of the approaches to management and restoration trialled in woods around the country.

Managing deadwood in forests and woodland 2012

Choosing stand management methods for restoring planted ancient woodland sites, 2013.

Appendix B: CSM 6 — Amendments to Approved Forest

Forestry Commission (Forest Services and Forest Enterprise) should agree baseline tolerance thresholds for operations in each District beyond which exchange of letter/map or formal amendment is required. Unless otherwise specified or agreed by the Forestry Commission, amendment will be by formal revision of the plan.

	Adjustment to felling coupe boundaries (1)	Timing of Re- stocking	Changes to spe- cies	Windthrow clearance (2)	Changes to road lines (3)
FC Approval normally not required	0.5 ha or 5% of coupe - which- ever is less	Up to 2 plant- ing seasons after felling	Change within species group e.g. evergreen coni- fers; broadleaves	Up to 0.5ha	
Approval by exchange of letters and map	0.5ha to 2ha or 10% of coupe - whichever is less			0.5ha to 2ha - if mainly wind- blown trees > 2ha to 5ha in areas of low sensitivity	Additional felling of trees not agreed in plan Departures of >60m in either direction from centre line of road
Approval by formal plan amendment	> 2ha or 10% of coupe	Over 2 plant- ing seasons after felling	Change from specified native species Change between species groups	> 5ha	As above, de- pending on sensitivity

Notes on Tolerance Table

1. There are circumstances in which changes - of less than 0.5 ha for example - could have a dramatic visual effect. The above model does require a sensible approach to be taken by Forest Enterprise in notifying Forestry Commission when such cases arise. Local staff need to be sensitive to issues which may influence the situation (bearing in mind that small adjustments to felling coupes will not appear on the Public Register).

2. It is important that Forest Enterprise keep the FC informed about windblow clearance, which can be problematic in cases of public complaint, and in FC compliance monitoring. In some cases a modification of the proposals for the remaining area of the Plan may need to be submitted and approved. Clearance of blow should not require approval but will be needed for related standing trees.

3. It is recognised that roading proposals as marked on Road Plans are necessarily somewhat indicative, in that actual roading operations require to take account of features not always apparent at the time of roadline planning. Accordingly some leeway is acceptable to account for this.
