

Small Clearfell.

Not a substantial piece that is vulnerable to wind pressures.

This will be removed to allow the development of a more diverse area of naturally regenerating broadleaves and conifer together.

Larch infected with *P. ramorum*.
Has to be felled under a legal statutory plant health notice.

Whilst we don't like to see Larch removed earlier than planned, it does allow for the improvement of the riparian area around the watercourse, and species associated with this habitat.
